Graduation

PROJECTS

Scan-Q

A digital platform to register both teachers and students to maintain attendance. The focus was on eliminating the proxies, maintaining the records, reducing the human error and letting students know about their attendance.

Portfolio

A lot of students and professionals either don't have a website or face difficulty building one. For a beginner, it becomes tedious to build a website from scratch, deploy it and host it. We built a mobile app which would empower website owners to easily host their website and manage it. The users would be able to easily showcase their knowledge, projects, experiences and blogs on a website with the help of a mobile app.

SKILLS

Flutter, Django, Python,
HTML5, CSS3, Bootstrap4, PHP
, JavaScript, C, C++, Data
Structures, Google
Cloud, MySQL, Java, Dart
